

PLANTA Link Flexible Universal Interface

The PLANTA Link add-on is a universal interface for the import or export of data to other systems, for instance SAP. Flexible and easily to configure interfaces can be created quickly using modular elements, including a library of standard parameters and drag & drop technology.

Individual solutions can thus be created to meet the specific demands of each customer in terms of the content and structure of data transfer. Predefined interface templates for common interface types are included in PLANTA.

PLANTA supports various interface technologies for data import and export; for example diverse file formats (.csv, ...), web service and SAP RFC calls. The interfaces can be parameterized and automated. The graphical interface of PLANTA Link provides for easy creation, configuration and visualization of interfaces. Intermediate steps can also be created that allow for data conversion and validation.

Your Benefits

- Flexible: import/export controlled by parameters
- Safe: data integrity protected at all times
- Transparent: all actions are logged
- Reliable: plausibility checks
- Simple: using modularization and drag and drop technology together with the availability of templates and archiving functions
- Individual: the appropriate interface for each customer
- Process-oriented user interface based on company workflow
- Lean database architecture
- High performance even with >1000 users
- Open 3-tier client/server architecture
- Intuitive script language Python
