

## The Goal:

KETEK GmbH was looking for a centralized solution for its growing multi-project management, as various tools such as Excel and MS Project had previously been used, which did not allow for sufficient transparency and overview.

With PLANTA Project, a uniform PM system was to be introduced that centralizes project information, maps the company's process models, and thus significantly improves project overview and coordination across projects.

“

*„Thanks to PLANTA, our project landscape is more accessible than ever before.“*

**Wolf-Georg Pichler**  
Responsible for Project Management

## About Ketek

### Industry

Research & Development

### Company size

100+ employees, 1 site

### PLANTA in use since

2020

### Use

Project participants, stakeholder

### Use case

Multi-project management

### Edition and extensions

PLANTA Enterprise

### Short portrait

KETEK is the world's leading manufacturer of silicon drift detectors. SDDs are found in X-ray fluorescence spectrometers and electron microscopes and contribute to countless materials research experiments around the world—and even on Mars.

## Advantages with PLANTA Project

### Centralization

PLANTA creates a uniform, centralized view of all projects simultaneously, which significantly improves overview and coordination across the company.

### Database

All project data and meeting minutes are stored centrally in the system, eliminating information silos and creating consistent data sources.

### Project Overview

Project dependencies and statuses are easily identifiable, enabling realistic planning and better coordination across project boundaries.

### Efficiency

PLANTA supports project-related time tracking, task planning, and transparent processes for complex development and parallel projects.
