

The Goal:

At the pharmaceutical company Siegfried, established structures and a variety of different working methods led to inconsistent processes, data, and responsibilities. The goal was therefore to introduce uniform project management. A central software solution was to be used to achieve standardized processes, greater transparency and data quality, and central documentation of knowledge, risks, and decisions in order to make project work more efficient and improve its quality across all locations.

“

„The introduction of PLANTA Project was more than just an IT project for Siegfried AG—it was a company-wide change process.“

Ueli Huldreich Trafelet
Sr. Project Manager PMP, Drug Substance

PLANTA Project

Short portrait

Siegfried is a leading contract development and manufacturing company with a global network of 13 production sites on three continents. With 150 years of experience in the pharmaceutical and chemical industries, we bring your innovations to an industrial level.

Advantages with PLANTA Project

Consistency

PLANTA standardizes heterogeneous processes and creates uniform, comparable workflows with consistent procedures across different locations.

Transparency

Centralized, cross-location project information and key figures increase data quality and create a reliable basis for decision-making.

Knowledge Archive

Risks, decisions, and project experiences are documented centrally and are systematically available for future projects.

Efficiency

Standardized workflows, project templates, and system integrations reduce effort, improve planning, and support multi-project reporting.
