

Container solution

More efficient, flexible and user-friendly – with PLANTA

With the latest release, PLANTA is transitioning to modern container technology – ensuring future-proof and highly flexible software deployment. Our project management solution is now delivered as a standardized container image – packed with all necessary components and ready to use.

Customizable Technology

PLANTA uses Docker as the standard platform. The underlying OCI standard (Open Container Initiative) is also supported by Podman, Kubernetes and OpenShift. This means you are free to choose any OCI- compliant platform – provided the respective container technology is supported by your operating system (e.g. Linux or Windows).

Who is it for?

- ✓ IT departments benefit from reduced administrative effort
- ✓ Project managers and teams can get started immediately without installation issues or time-consuming setups.

Benefits at a Glance

- ✓ **Platform-independent**
Whether locally, on servers, or in the cloud PLANTA runs reliably everywhere.
- ✓ **Low-maintenance & stable**
Updates are easier, faster, and come with minimal downtime.
- ✓ **Scalable & efficient**
Resources can be utilized optimally – even as demands increase
- ✓ **Secure & isolated**
Applications run independently without interfering with one another.
