Project Management & AI

Plan smarter with PLANTA

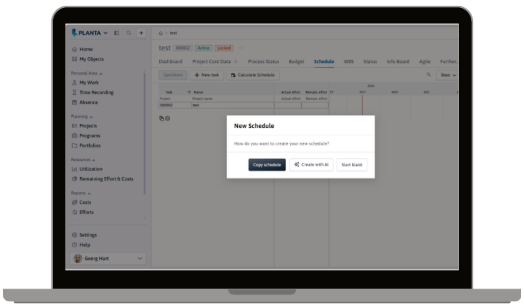

Why AI?

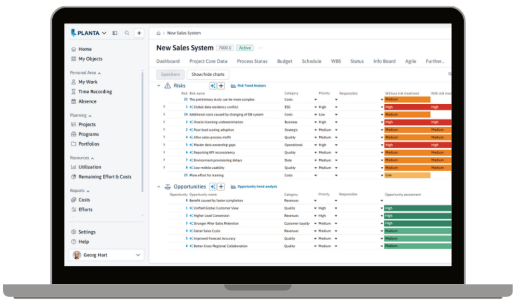

Projects are becoming increasingly complex, requirements are changing more rapidly, and teams are more interconnected and dynamic than ever before. Artificial intelligence opens up new possibilities: it supports planning, structuring, and communication—exactly where time is limited and precision is crucial.

With the AI features in PLANTA, you benefit from modern technology in both traditional and agile project management. This enables projects to start faster and teams to collaborate more efficiently.

AI in classical projects

- Automatic generation of schedules
  - AI analyzes stored information (project duration, dependencies, milestones, resource availability) to create realistic schedules
- AI-Assistant in the help center
  - Answers questions about features, modules, and settings
  - Provides quick responses and solution suggestions, with links to the relevant area in the software when needed

AI in agile projects

- *Generate boards*
  - Define the title, description, and purpose, and have the board created automatically
- *Create checklists*
  - Automatically generate meaningful subtasks
- *Improve, expand, and rephrase texts*
  - Receive a revised suggestion directly within the card

Support in risk management

- *Risks, opportunities and measures for a project can be automatically suggested by AI based on previously recorded project information.*

Identification for risks

Opportunity assessment

Development of tailores measures

Work even more efficiently with workflows

- *Define rules & automations using workflows to map your process on a board*
  - Automate recurring processes and save time
- *Link cards with each other*
  - Clearly visualize task hierarchies or dependencies
