Plan, Decide and Manage Projects systematically

PLANTA Project offers you optimum support in all project phases: This allows you to always have an overview of the deadlines, resources and costs of all projects and can identify and eliminate bottlenecks at an early stage.

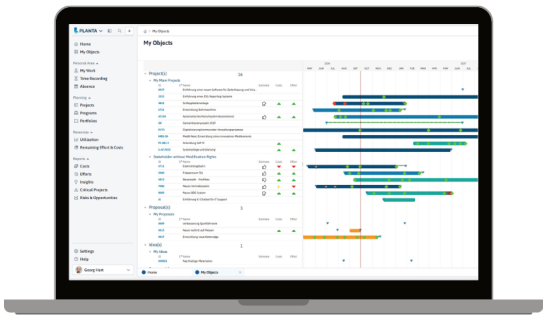

Plan projects and project applications systematically. Create your own standard within the company.

- Project templates, adjustable process model, company-specific workflows
- Task management, process planning, scheduling
- Cost planning, risk management, key financial figures

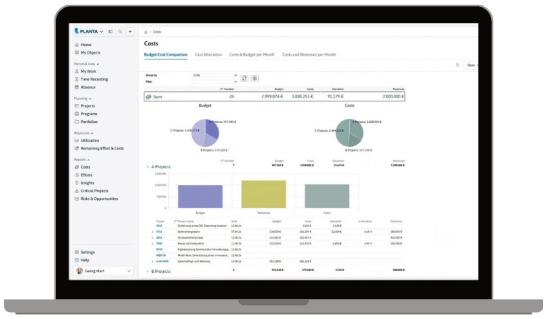

Cost planning, risk management, key financial figures. Immediately identify the progress of the project and free capacities

- Transparent resource utilization across all projects
- Performance and cost recording
- Milestone control

Always make decisions based on up-to-date project data. Set up your own multi-pro-ject information system.

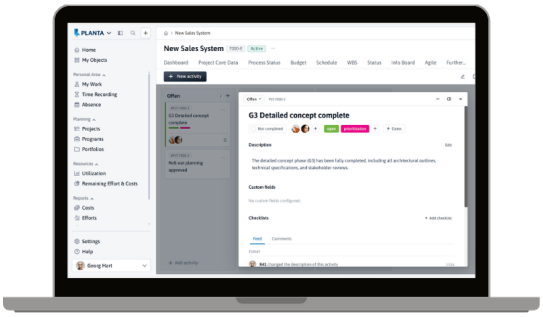

- Meaningful reports at the touch of a button for sin-gle and multi-project management
- Cost management at every level of the project
- Structure, risk management, conflict management
- Reliable monitoring, target/actual comparisons, trend analyses, status reports

Use the method that suits your projects: do you need structure (traditional method) or flexibility (agile method)?

- Kanban-Boards and Scrum for agile project management
- Detailed planning with milestones, project budgets and risks using traditional project management
- Plan a hybrid approach and flexibly combine both methods within the project

Location-independent collaboration: Flexibility and efficiency also in digital collaboration

- Collaboration: task planning and project communi-cation in one place
- Fast and intuitive operation with Kanban boards and additional views
- Time recording on the respective process

Project portfolio management: Achieve project objectives more efficiently using the Enterprise Edition

- Identify opportunities and risks of new project ideas with the help of risk checklists and target assess-ment.
- Prioritize your project ideas and plans using strategic capacity planning and portfolio simulation and create your portfolio roadmap.
- Always maintain an overview of the status of existing project portfolios and monitor them using quality-gates, status reports and a graphical visualization of the project estimate
